Confidential

Storefront cookies are necessary for essential ecommerce purposes such as security, consent, and order processing. These cookies must remain present in order for a storefront to function properly. Additional information about how these types of cookies are generally considered strictly necessary can be found in the EU's official guidance on the E-Privacy Directive and this EU-funded GDPR guidance.

Although merchants remain ultimately responsible for managing any cookies or scripts placed on their storefront, BigCommerce makes available a cookie consent manager in the security & privacy settings of its control panel. If using the BigCommerce consent manager, merchants must ensure that any non-default storefront cookies or scripts added by or on behalf of the merchant are entered into the BigCommerce script manager. Merchants can prevent the default storefront cookies listed herein from collecting personally identifiable information for analytics purposes by unchecking "analytics for my business."

**BigCommerce is currently migrating the names of these cookies. Currently either cookie may be represented on your storefront as the cookies are migrated to the new names.*
